

DIPLOMA IN ELECTROCARDIOGRAPHIC TECHNIQUE

ECG Technician

Diploma In Electrocardiographic Technique

What is it about?

An ECG technician, also called as cardiographic technician, uses electrocardiogram machines to run diagnostic tests to measure a patient's heart rate, monitor cardiac rhythm and help physicians find irregularities in the heart and blood vessels.

This unique program provides students with a background in medical areas such as anatomy and physiology and a concentration in Electrocardiography.

Career Prospects

After the completion of the programme, you may seek interesting entry-level employment opportunities in physician's offices, clinics or laboratories, hospitals, group practices, and nursing homes. Technicians can work in a variety of institutions, medical device companies or insurance companies.

Common job profiles of students after completing DECG include:

Junior/Assistant ECG Technician, ECG Technician
